AUSTIN CHICHEBEM OKEZIE

Software Engineer

okezieaustinch@yahoo.com | +234 706 173 3438 | https://austin-ok.vercel.app/

PROFESSIONAL SUMMARY

Software engineer specialising in secure application development and database security across relational databases including Oracle, SAP HANA, PostgreSQL and MS SQL Server. Builds enterprise applications, REST APIs and system integrations in Python, java, JavaScript and PLSQL, with a focus on access control, SQL injection prevention, audit trails and automated security testing across SAST, SCA and DAST. Leads an engineering team delivering applications used across multiple business entities, and brings data science and machine learning expertise, including building retrieval-augmented generation (RAG) systems and Model Context Protocol (MCP) servers. Oracle-certified (OCI DevOps Professional, OCI Multicloud Architect Professional, APEX Cloud Developer), Lean Six Sigma Green Belt and Oracle ACE Apprentice.

CORE COMPETENCIES

- **Databases:** Oracle Database, SAP HANA, PostgreSQL, MS SQL Server, MySQL, PL/SQL, SQL
- **Database Security:** Access control, database security scanning, least privilege, SQL injection prevention, audit logging, data integrity, data migration
- **Application Security:** Secure coding, OWASP Top 10, SAST, SCA, DAST, XSS prevention, authentication and authorization, session management, API security, vulnerability scanning, code review
- **Security Testing Tools:** Opengrep, Semgrep, SonarQube, Burp Suite, OWASP ZAP
- **Governance, Risk & Audit:** IT audit support, internal controls, approval workflows, reconciliation, change management, version control, root cause analysis, Lean Six Sigma
- **Cloud & DevOps:** Oracle Cloud Infrastructure (IAM, VCN, Compute, Storage), Terraform, Docker, Kubernetes (OKE), Git
- **Programming:** Python, JavaScript, PHP, REST APIs, low-code development (Oracle APEX)
- **AI & Data Science:** Machine learning, RAG, MCP servers, LLM integration, Oracle Select AI, TensorFlow, scikit-learn, ETL pipelines, data analytics

PROFESSIONAL EXPERIENCE

Software Engineer **2025 – Present**

Tolaram Africa Enterprises Ltd

- Lead the low-code development team, delivering enterprise applications used across Tolaram entities.
- Built an in-house security scanning tool for low-code applications and their databases, detecting SQL injection risks in dynamic SQL, XSS escaping gaps, missing authorization checks, weak session state protection, hardcoded credentials and database object dependencies, scoring each application 0–100 by severity; designed to run without SYS/ADMIN privileges.
- Built RAG (retrieval-augmented generation) applications and MCP (Model Context Protocol) servers connecting AI assistants to enterprise data.
- Built a helpdesk application for raising and managing tickets across all Tolaram entities, with secure REST APIs using API-key authentication, environment isolation and transactional rollback for automated (RPA) integrations.
- Built a reconciliation application automating intercompany reconciliation, trial balance and inventory tracking, plus read-only audit tools for POS-to-SAP sales and discount data, improving accuracy and accelerating period-end closing.
- Implemented database trigger-based audit trails for SAP customer and supplier master data block/unblock requests, logging every change from request to completion or failure.
- Delivered multi-level approval workflows for SAP-connected changes, including BOM production version unlocks and GL account creation, enforcing sign-off controls and notifications.
- Developed machine learning solutions, including an item similarity model that improved search relevance by 35% and reduced category mismatch rates by 20%.

Junior Software Developer **2023 – 2025**

Dufil Prima Foods Ltd

- Designed and developed intuitive user interfaces and robust software solutions, including a product weighing application that increased weighing accuracy by 25% and reduced manual data entry by 80%.
- Leveraged machine data to build real-time visualizations, improving production monitoring by 20% and enabling faster decision-making.
- Developed factory-specific applications that boosted production efficiency by 30% and streamlined operational workflows.

Data Scientist & Quant Analyst **Aug 2021 – Dec 2023**

Edusearch Global Network Ltd (Hybrid)

- Engineered ETL pipelines and automated reporting dashboards in Python and SQL, reducing client data processing time.
- Built predictive cash-flow forecasting, pricing optimization and customer segmentation (CLV/RFM) models for SMB analytics applications.
- Designed risk management models (VaR, Monte Carlo simulation) and deployed systematic trading strategies on MetaTrader 5.

Quantitative Analyst (Contract Intern) **May 2019 – Jul 2021**

Legendary LM Analytics (Remote, South Africa)

- Backtested and deployed systematic trading strategies via Python on MT5, improving strategy Sharpe ratio from 1.1 to 1.65.
- Automated live trade execution with Python scripts and built statistical arbitrage models, cutting slippage by 3.5 bps and improving signal prediction accuracy by 12%.

EDUCATION

BSc Computer Science – Federal University of Agriculture, Abeokuta (FUNAAB) **2023**

CERTIFICATIONS & RECOGNITION

- Oracle Cloud Infrastructure DevOps Professional – Oracle
- Oracle Cloud Infrastructure Multicloud Architect Professional – Oracle
- Oracle APEX Cloud Developer – Oracle
- Oracle Cloud Infrastructure (OCI) Associate – Oracle
- AI-Enabled Lean Six Sigma Green Belt – Benchmark Six Sigma (2026)
- Oracle ACE Apprentice – Oracle ACE Program (2026)
